MATRIX 1200

Secure attractive early  
purchase conditions  
when buying a new

**MATRIX 1200**

**MATRIX 1800**

The MATRIX is a mechanical  
precision seeder for seeding of  
beets, canola and chicory roots.

MATRIX 1800

### Quickly folded and safe on the road!

The hydraulic parallel folding without sensors enables the MATRIX to be folded to less than 3 m for road transport in less than 12 seconds.

### Secure attractive early purchase conditions when buying a new **MATRIX 1200** or **MATRIX 1800!**

These early order discounts are valid on orders and payment for new machinery from 01/05/2024 - 31/08/2024. These offers can not be combined with any other promotion.

### Intelligent assistants

The standard ISOBUS technology enables operation via an ISOBUS operator terminal as well as the use of Section Control, Variable Rate Control and Clever Planting.

### The right caster wheel for all conditions

Depending on the cultivation conditions, a choice can be made between fingertip press wheels, Monoflex-rollers or V-shaped Farmflex wheels. For a perfect start to the development of the young plant.

### Exact depth control

Thanks to the parallelogram suspension of each seeding units, smooth running and precise depth control are ensured.

### High accuracy seeding

The combination of an internally filled cellular wheel, electric drive and minimum drop height of the seed into the seed furrow ensures precise seed placement.

### Reliable field emergence

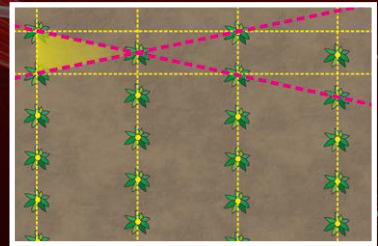

Using the seeding coulter "deep" fitted as standard, improved capillarity is achieved for the beet seed, thus promoting germination in dry conditions. The intermediate press wheel ensures an optimum soil contact and the furrow closers ensure that there is enough fine soil to cover the seed in the furrow.

MATRIX

## MATRIX-seed

Using the "MATRIX-seed" option, the individual beet seed can be placed in a triangular formation within the width of the machine. This has positive effects on the utilisation of nutrients, water and sun.

The web-based data exchange platform called "agrirouter" enables the exchange of data between machines and agricultural software from different manufacturers and suppliers.

## Digital. Simple. Connected - myGRIMME

myGRIMME is your gateway to the digital world of GRIMME. With your account, you always have your virtual machine file with all digital services and information with you in real time. In addition, your machine tasks are automatically documented and analysed clearly. Furthermore, with the webshop you have the possibility to order spare parts online.

myGRIMME can be used on any internet-enabled device and is free of charge for you.
